The doctor’s journey, from application to agenda

Low-fidelity wireframes for the clinician side of Carevia: applying, being verified, getting a login, setting up, seeing patients, and leaving well. It follows the patient journey wireframes and the plan in docs/doctors-journey/PLAN.md. Nothing here stores clinical data: the record, prescriptions and certificates stay in iMED. Plain borders already exist, dashed borders are new, double borders are existing screens with additions.

Exists Exists, with additions New

1 THE JOURNEY IN FOUR PARTS
2 APPLY AND BE VERIFIED (D01–A02)
3 GET A LOGIN AND SET UP (A03–D10)
4 THE WORKING DAY (D11–D15)
5 PRACTICE ADMIN AND LEAVING (D16–A04)
6 WHEN THINGS GO WRONG (E01–E04)
7 BUILD ORDER AND OPEN QUESTIONS

SECTION 1

The journey in four parts

A doctor touches Carevia in four parts. Onboarding (part 2) happens once; the working day (part 3) is where the product must stay out of the way.

1

Apply and be verified

Join Carevia, apply in five minutes. Carevia checks the cédula with the Ordem, identity, specialty and insurance, then decides.

D01–A02

○ Careful, human-paced

2

Get a login and set up

An admin creates the profile and sends an invite. The doctor sets a password, secures the account, checks the public profile, accepts how Carevia work works, opens hours, tests the camera.

A03–D10

● Guided, resumable

3

The working day

Agenda, prepare, call as room owner, one of four outcomes, write it up in iMED. Repeated daily.

D11–D15

● Fast, quiet

4

Run the practice, then leave well

Hours, time off, history, account. Pausing or leaving never strands a booked patient.

D16–A04

○ Self-serve, reversible

D01 Apply
5 min, no account

›

A01–A02 Verify
Admin checklist, approve or decline

›

A03 Invite
Profile + login, email invite

›

D03–D10 Onboard
Password to first open hours

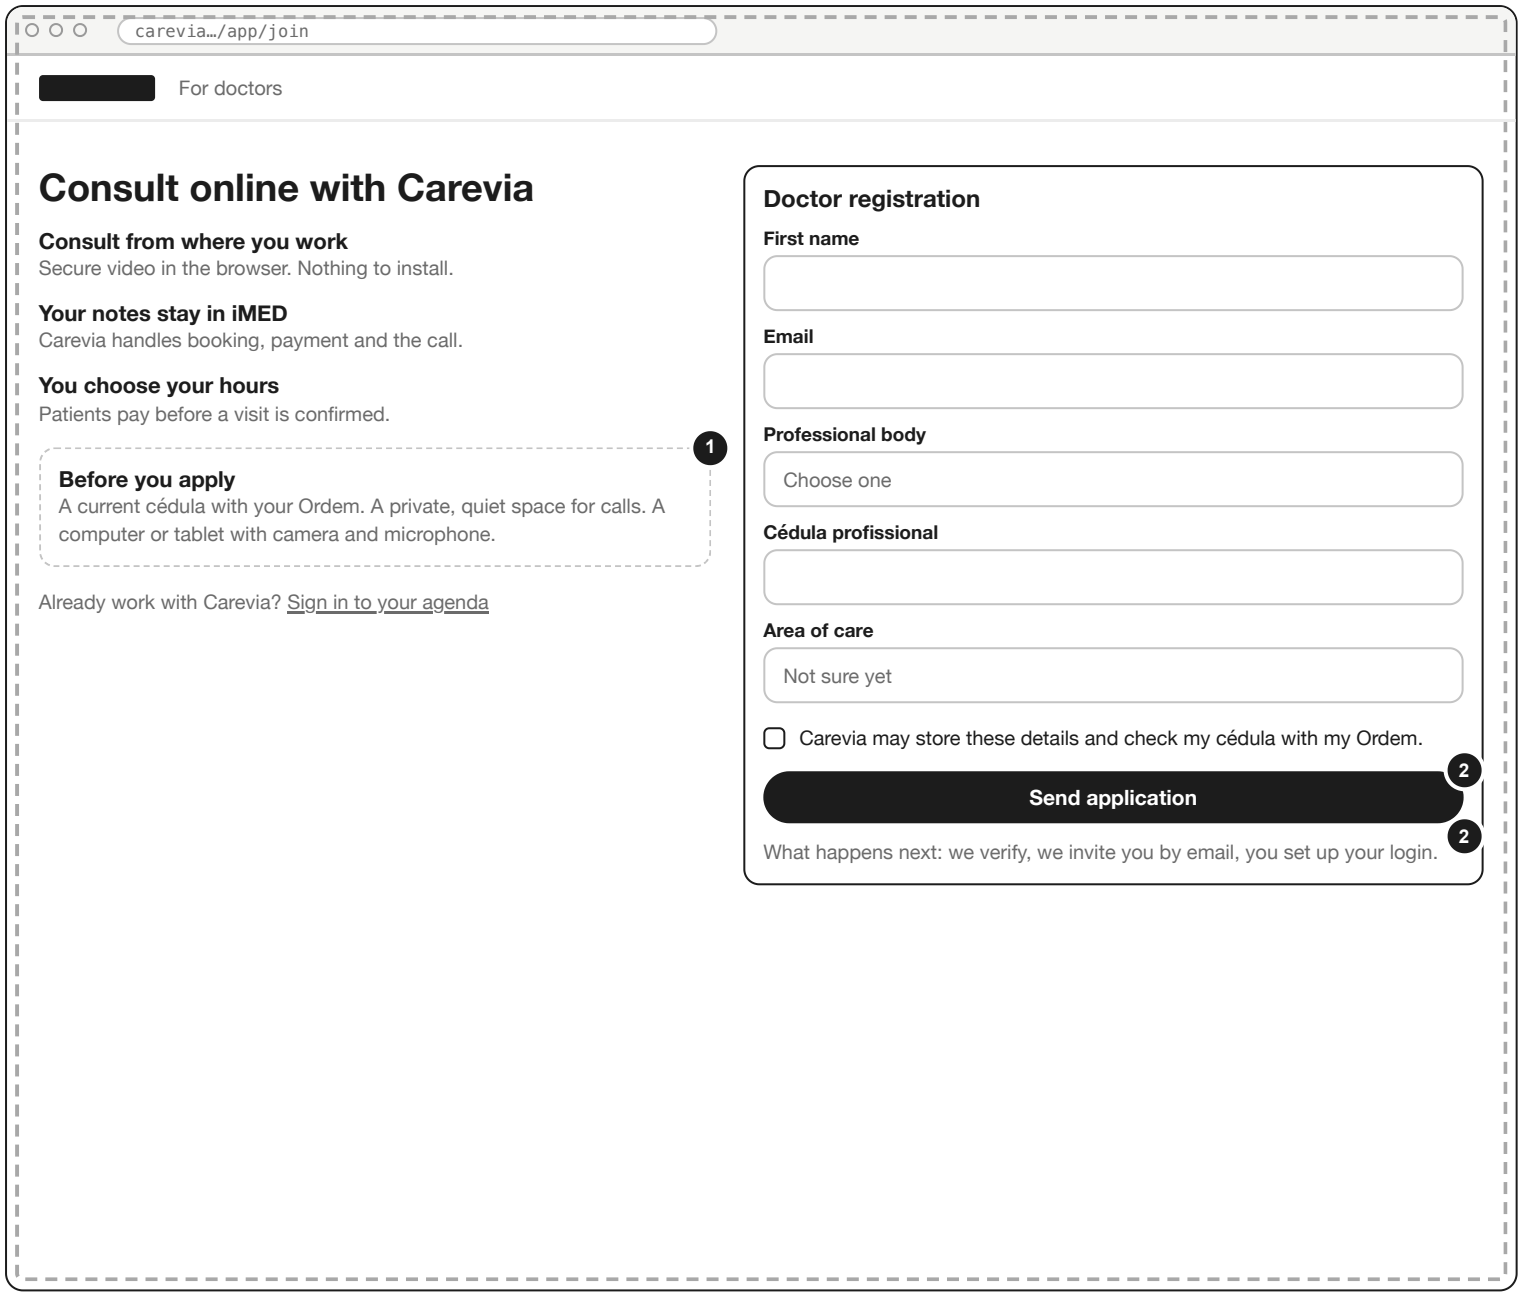

›

D11 Agenda
Profile goes live here

The blocking gap today sits between “Approve” and “Sign in”: approving an application creates nothing, and no screen can create a clinician login or link it to a doctor profile. Wave D-A of the plan closes it.

D01 · Join Carevia (public)

EXISTS, WITH ADDITIONS

1 Eligibility before the form NEW
One short strip. It prevents most declined applications without a single new field, and repeats the private-space rule from the clinician agreement.

2 Name the next steps
The three steps on this page gain one line each: invite by email, set up your login, open your hours. The onboarding checklist (D04) then feels expected, not new.

Kept as built: why-join copy, three steps, the form, professional body and cédula fields, consent tick, rate limit. No account, no password, no document upload at application.

D02 · Application received & A01 · Application detail (admin)

D02 EXISTS · A01 NEW

carevia…/app/join

FOR DOCTORS

Application received

We'll check your cédula with your Ordem and call you within a few working days.

We'll write to **doctor@example.com** if we need anything else. Your reference: **CV-APP-0000** 1

1 · We verify	Cédula, identity, specialty
2 · We invite you	An email sets up your login
3 · You open your hours	Then patients can book you

Carevia homepage

DOCTOR APPLICATIONS · NEW

Dr Firstname Lastname

Received 3 Nov 2026 · Ordem dos Médicos · Cédula 00000

Contact
doctor@example.com
+351 900 000 000

Practice
General and family medicine
8 years · Portuguese, English
Area: General & urgent care

Anything else
Hours I'd like to offer, or questions. (Optional, from the form.)

2

Verification
Tick each item as you check it. See A02.

- ☐ Cédula checked with the Ordem
- ☐ Identity matches the cédula holder

Contacted · Approve · Decline 3

1 **A reference, not a tracker**
The applicant quotes CV-APP-0000 in any email. There is no public status page and no login yet.

2 **One row per application**
The inbox list stays as built. Opening a row shows the whole application and the verification checklist together.

3 **Approve stays off**
Until every required check is ticked (A02). Decline stores no reason; the applicant gets a plain email.

A02 · Verification checklist & A03 · Invite and link login (admin)

NEW SCREENS

Admin · Application · Verification

Verification

Each tick records who checked it, and when. These are launch gates, not paperwork: ERS registration, a verified cédula, insurance.

- ✓ **Cédula checked with the Ordem**
  Number and body match the application. Admin name · 4 Nov
- ✓ **Identity matches the cédula holder**
  Checked on the introductory call.
- 3 **Specialty and area within competence** — Tick
  General and family medicine in General & urgent care.
- 4 **Liability insurance confirmed** — Tick
  Record “confirmed” and the date. Do not store policy files.
- 5 **Introductory call done** — Tick
  Hours, services, how Carevia work works.

Approve — Approve opens the invite (A03). 1

Admin · Doctors · Doctor · Login

Doctor login

Profile	Dr Firstname Lastname · Hidden
Shown to patients	Not yet. Goes live at the end of onboarding.

2

Login

No login yet
Send an invite to set up the doctor’s login.

Invite email

doctor@example.com

Send invite — Creates the clinician login, linked to this profile. The link expires and works once.

After the invite

Invite sent 4 Nov · Email verified: no · Two-factor: off

Resend · Revoke

One login per doctor. A patient account cannot become a clinician account here. 3

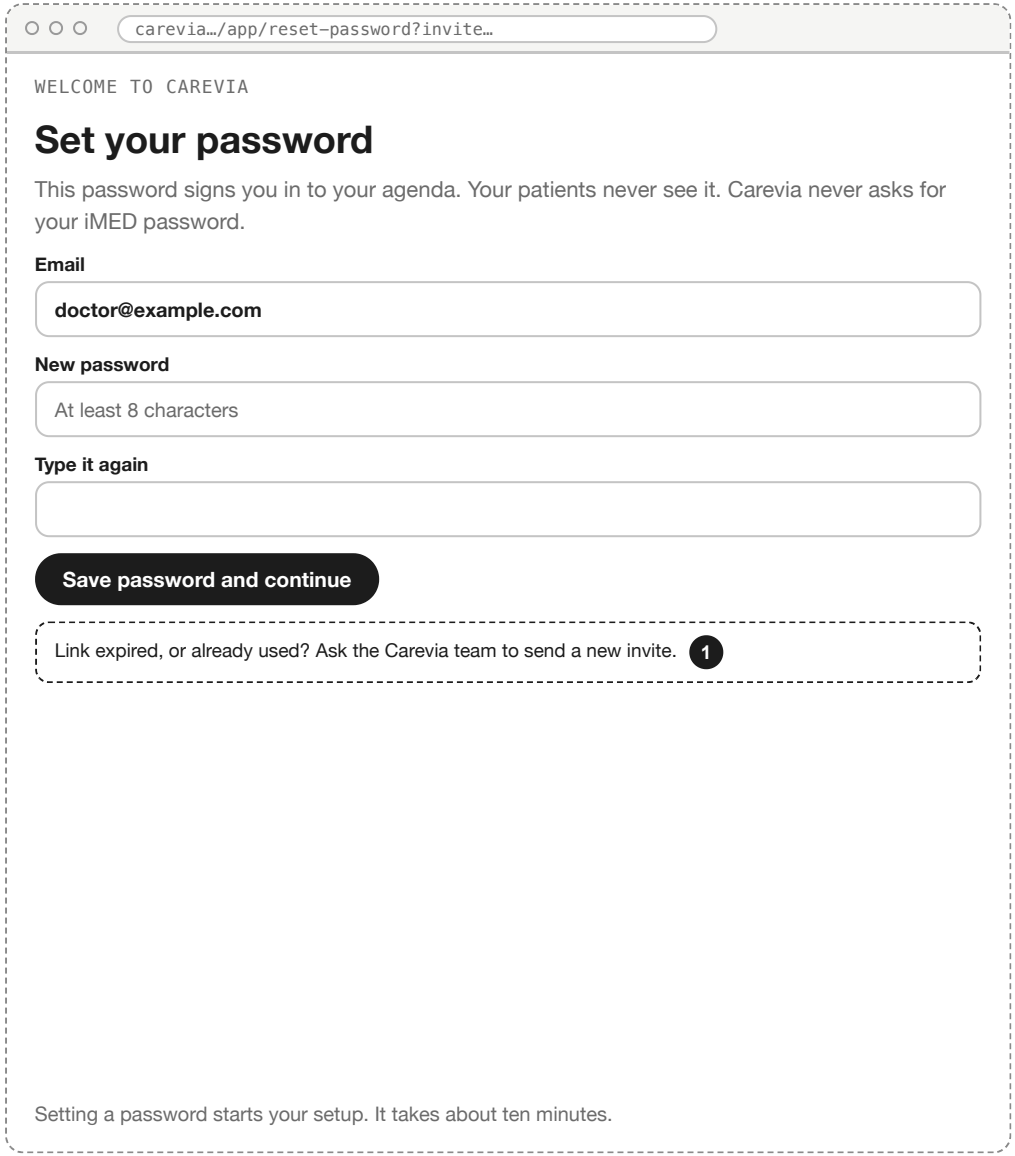

1 **Approve is a decision**
It creates nothing by itself. A03 creates the profile and login, in that order.

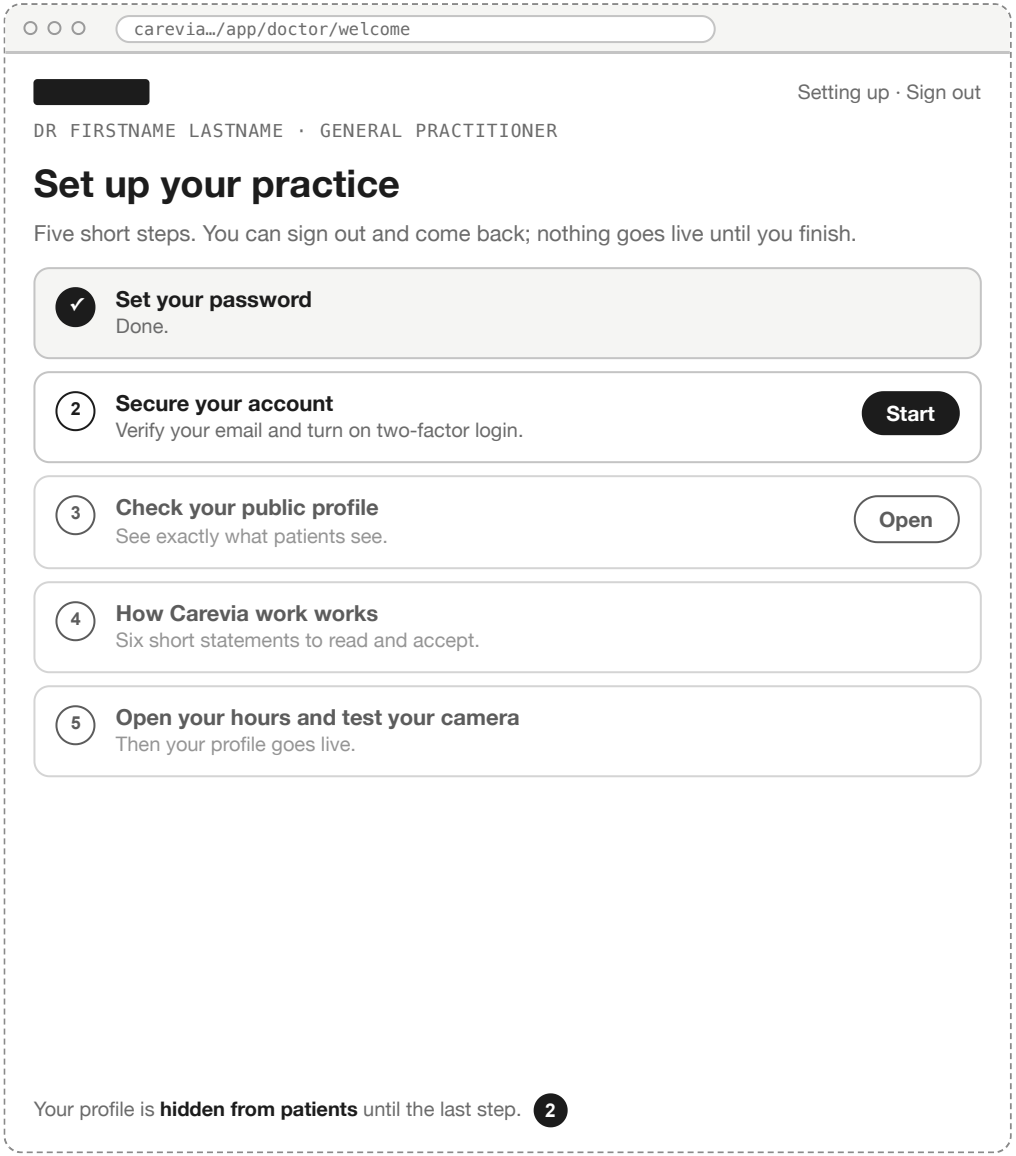

2 **The missing screen**
Today this link can only be set by hand in the database. This panel is wave D-A, the blocking fix.

3 **Same panel in the Doctors editor**
Seeded and imported doctors have no application. They are linked here too.

D03 · Accept the invite & D04 · Your setup checklist

NEW SCREENS

1 An invite, not a reset
Same secure link machinery, clinician words. Single use, expiring, never shown in logs.

2 The checklist is the shell
Until it is finished, a clinician sees only this, sign out and help. The agenda is not reachable.

3 Resumable
State lives on the server, one row per clinician. A reload or a new device lands on the same step.

D05 · Secure your account & D06 · Check your public profile

NEW SCREENS

carevia…/app/doctor/welcome/security

STEP 2 OF 5 · SECURE YOUR ACCOUNT

Two checks before your first visit

✓ **Email verified**
doctor@example.com. Booking and cancellation emails come here.

2 **Two-factor login**
After your password, a code from an authenticator app on your phone. Required for clinician accounts.

Turn on two-factor

Authenticator code

6-digit code

Then we show backup codes to keep somewhere safe.

Back to checklist

In the demo, two-factor can be skipped and the checklist says so. 1

carevia…/app/doctor/welcome/profile

STEP 3 OF 5 · YOUR PUBLIC PROFILE

This is what patients see

2

Dr Firstname Lastname
General practitioner · Cédula 00000

From €45

Languages	Portuguese · English
Experience	8 years
Training	Illustrative text, from your application.

Your name, cédula, specialty and fee are the verified ones. They are not editable here.

Languages, experience, about your practice

You can edit these three. They go live when you save.

This looks right

Something is wrong 3

Flagging an error tells the Carevia team and keeps your profile hidden until it is fixed. It does not block the rest of setup.

1 **Two-factor without a dead end**
Outside demo mode the agenda already refuses clinicians without it. Here it is a guided step, not a 403.

2 **Verified fields stay locked**
Name, cédula, specialty, area and fee are what the Ordem check confirmed. Patients must be able to trust them.

3 **Flag, don't chat**
One button, a short message to the team, nothing clinical. The same flag lives on D16 after onboarding.

D07 · How Carevia work works & D08 · Open your first hours

NEW SCREENS

carevia…/app/doctor/welcome/agreement

STEP 4 OF 5 · CLINICIAN AGREEMENT · DRAFT FOR LEGAL REVIEW

How we work together

- [ ] **A private space for every call.** You consult from somewhere private and quiet, with usable light.
- [ ] **Patients see who you are.** Your professional name and cédula show on your profile and in the visit.
- [ ] **The record lives in iMED.** Notes, prescriptions, certificates and test requests are written in iMED only. Carevia keeps booking, payment and call state.
- [ ] **Nothing is recorded.** Calls are never recorded in Carevia.
- [ ] **Poor quality ends the visit.** If sound or picture is too poor for a safe opinion, end it, record the Carevia outcome, and write the reason in iMED.
- [ ] **Not an emergency service.** Patients are told to call 112 in an emergency. You see patients who are in mainland Portugal.

I have read and accept these (1)

Version and time are stored, as with patient consent. The text is a draft for Carevia's lawyer.

carevia…/app/doctor/welcome/hours

STEP 5 OF 5 · YOUR HOURS

Open your first times

Patients book into open times. Start with a weekly pattern, adjust any day, change it whenever you like.

(2)

Your usual week

Mon · Tue · Wed · Thu · Fri · Sat · Sun

From 09:00 **To** 13:00

Apply to next 3 weeks

Mon 10 Nov	09:00	09:30	10:00	10:30
Tue 11 Nov	09:00	09:30	10:00	

Dark times are open. Tap one to close it. Visits last 30 minutes.

Save hours — At least one future open time is needed to finish. (3)

1 Tick each statement
Not one wall of terms. Each line is a rule the product already enforces elsewhere; here the doctor meets them once, plainly.

2 Pattern first, taps second
The pattern proposes; the day list (as built today) confirms. The same editor returns as D20.

3 One honest minimum
A live profile with no bookable time is worse than a hidden one. One open time unlocks D09 and D10.

D09 · Camera and microphone check & D10 · Ready

NEW SCREENS

carevia…/app/doctor/welcome/device-check

STEP 5 OF 5 · YOUR CAMERA AND MICROPHONE

Test them once, here

You, in a test room. No patient can join it.

- **Camera** Patients need usable light on your face.
- **Microphone** Say a sentence. We show the level here.
- **Speaker** Play the test sound.

One more sign-in

Your clinical record opens in iMED, with iMED's own login. Carevia never asks for that password. 1

Open iMED

Everything works

carevia…/app/doctor/welcome/ready

SETUP COMPLETE

You're ready to see patients

- Account secured (email verified, two-factor on)
- Public profile checked (Dr Firstname Lastname, Cédula 00000)
- Clinician agreement accepted (version, date)
- Hours open (12 times in the next 3 weeks)
- Camera and microphone tested

Start seeing patients 2

This turns your profile on. Patients can now book your open times. Turn it off any time from Your profile.

When someone books

We email you, and the visit appears in your agenda with the patient's name, the service and the time. Nothing clinical is ever in an email.

Go to your agenda

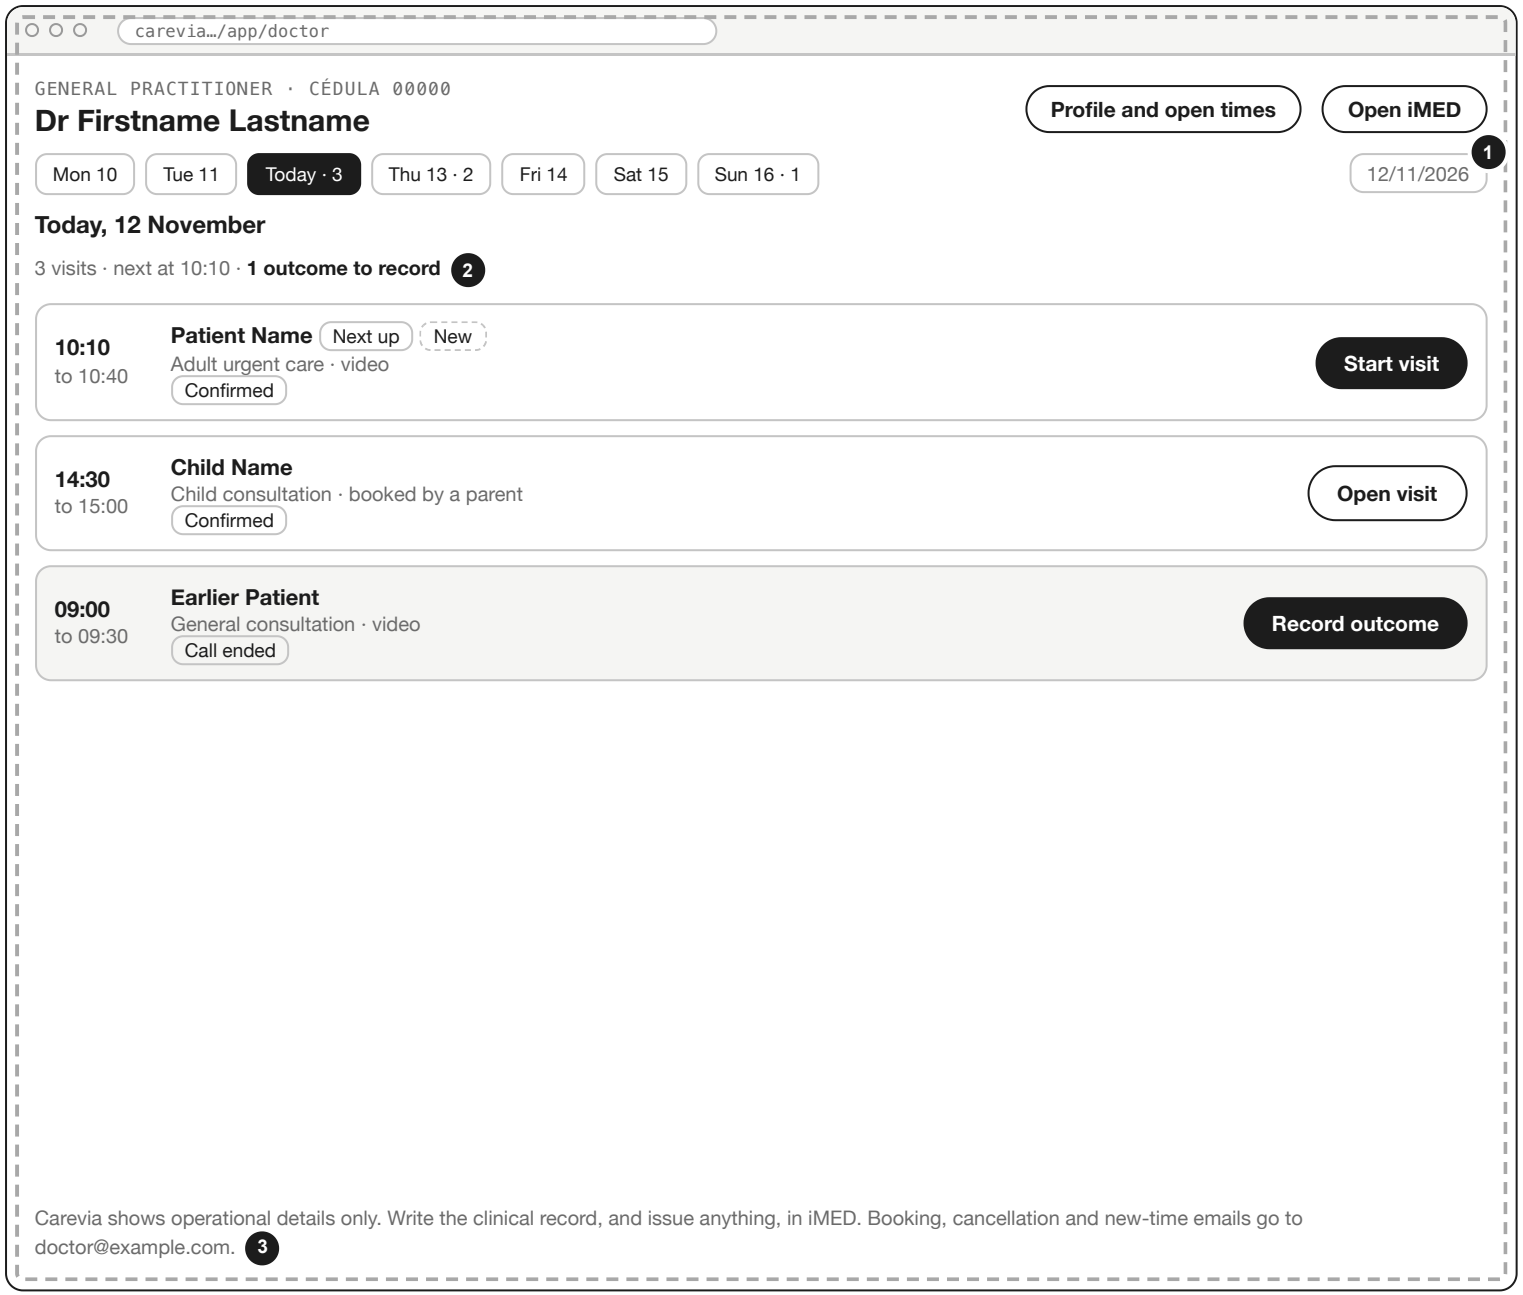

1 Two systems, said out loud
The most common first-day confusion is expecting notes inside Carevia. Naming iMED here prevents it mid-visit.

2 Going live is the doctor's act
This button flips the profile to shown. Before it, admin approval alone never exposes a doctor to patients.

3 Same checks as patients get
The device check reuses the patient pattern: camera, microphone, speaker, then a waiting step. Wording is the clinician's.

D11 · Your agenda

EXISTS, WITH ADDITIONS

1. **Week strip** NEW
   Seven days with visit counts, over the existing day buttons and date field. Not a month view: the schedule runs 21 days, and a week is how doctors scan.

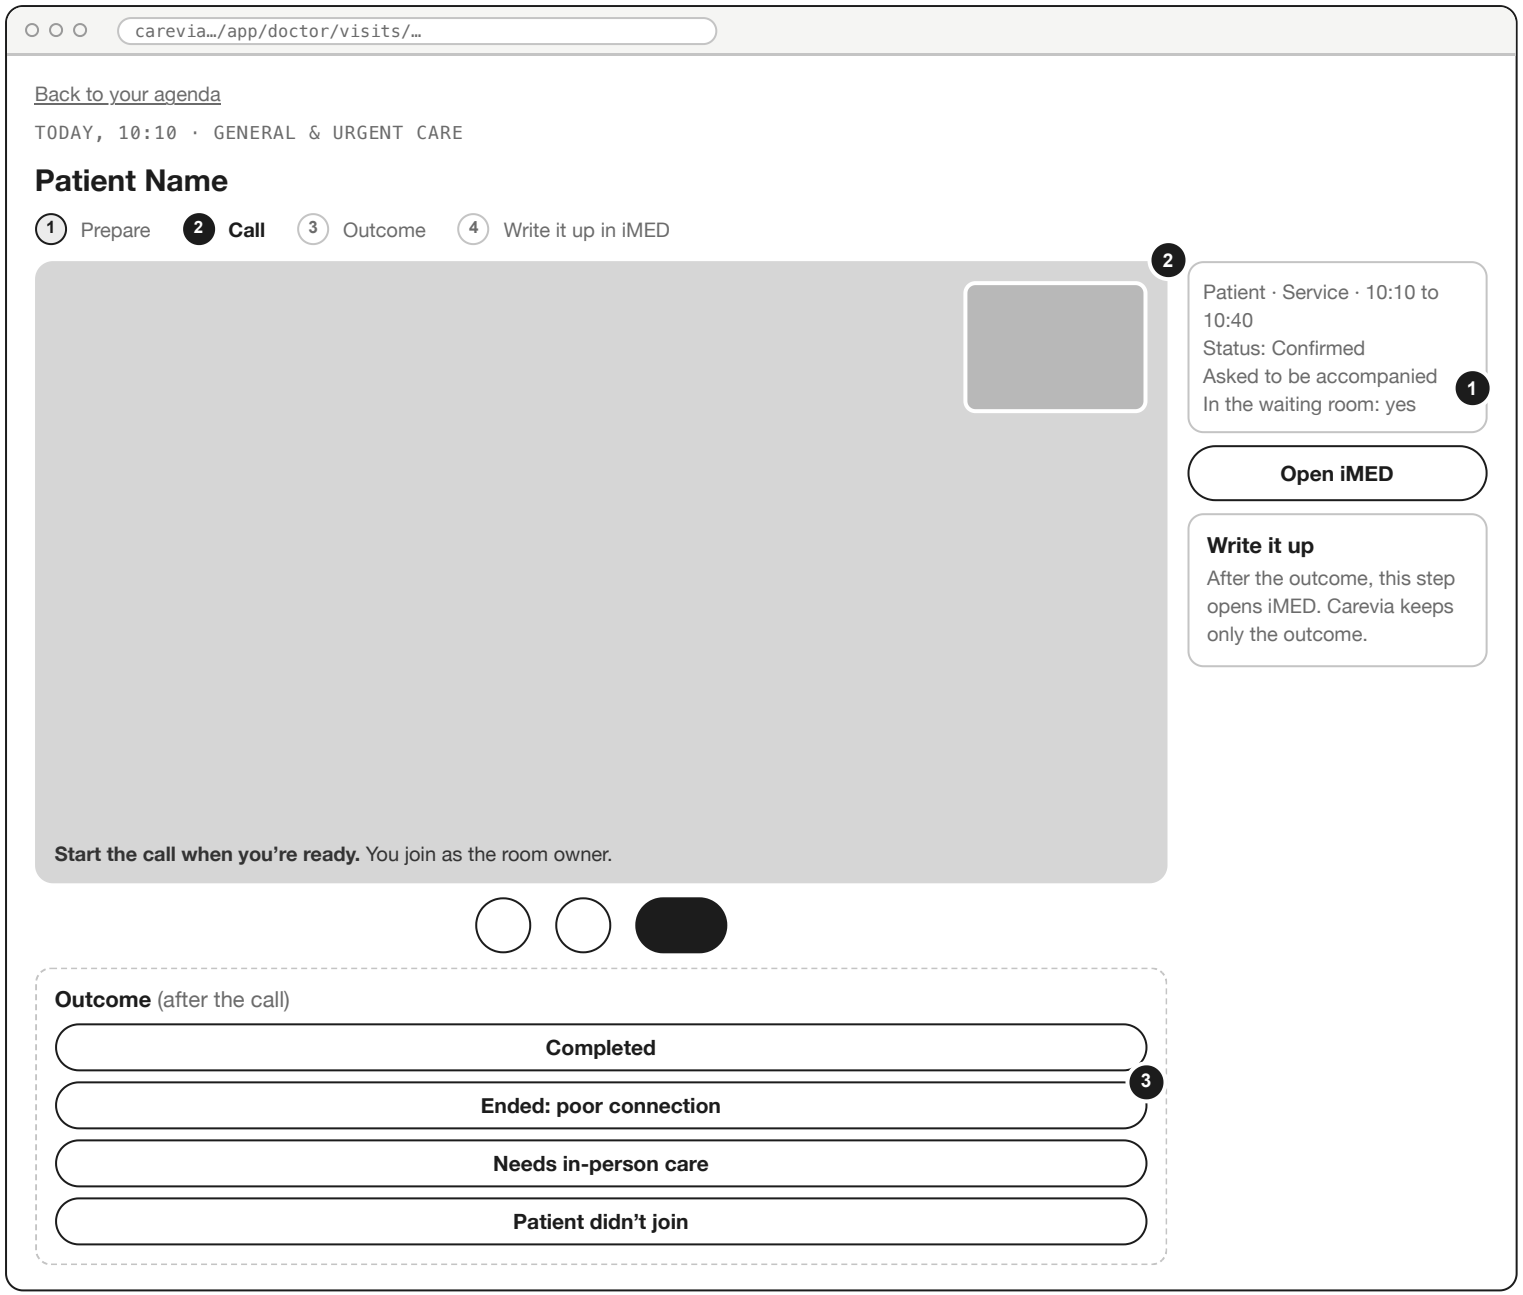

2. **Nothing unfinished hides**
   The outcomes-to-record count and the ended-call row stay as built. A visit cannot quietly lack an outcome.

3. **Booked and cancelled alerts** NEW
   An email per booking, cancellation or new time, plus a “New” mark until the agenda is next opened. No clinical content, ever.

Kept as built: day navigation, next-up, status badges, the iMED button, the operational-only footer. The patient’s own questions never appear here; they stay on the patient’s device.

D12–D15 · One visit, four steps

EXISTS

1. **Is the patient here?** ADDITION
   Prepare shows the stored pre-join state: confirmed, companion, in the waiting room. No new data is collected; the doctor simply stops guessing.

2. **The doctor owns the room**
   One private room per visit. The doctor's token can admit and remove; the patient's and companion's cannot. Never recorded.

3. **Four outcomes, no free text**
   "Ended: poor connection" keeps the same appointment open: rejoin, or the patient picks a new time without paying again. Reasons go in iMED.

Why one page, four steps: a reload lands on the step the appointment is actually at. The doctor never reconstructs where they were, and the outcome stays reachable even if video never starts.

D16 · Your profile & D20 · Your hours and time off

EXTEND · TIME OFF NEW

carevia…/app/doctor/profile

Back to your agenda

GENERAL PRACTITIONER · CÉDULA 00000

Your profile

1

Dr Firstname Lastname
General & urgent care

Shown to patients

Specialty / fee	General practitioner · €45
Cédula	00000 (verified)

Experience and training (patients read this)

Editable. Goes live when you save.

Save | **See what patients see** | Something is wrong

Stop being shown

Hides your profile and closes future open times. Booked visits are untouched. For a longer break, request a pause (D21).

Hide my profile 2

carevia…/app/doctor/profile · Hours

Your open times

12 open · 3 booked · next 21 days, Lisbon time. Dark times are open, white ones removed.

Your usual week

Mon | Tue | Wed | Thu | Fri

09:00 to **13:00** — **Apply**

Today	09:00	09:30 Booked	10:00
Tomorrow	09:00	09:30	10:00

Tap a time to open or remove it. A booked time stays until the visit.

3

Time off

From 20/12/2026 **To** 02/01/2027 — **Close these days**

Closes every open time in the range. If a visit is booked in it, we list the visits instead and close nothing.

1 Read the verified facts
Specialty, fee and cédula come from verification. The doctor edits languages, experience and training only.

2 Hide is not leave
Hiding is instant and reversible, and never cancels a patient. Pausing and leaving go through D21 and admin.

3 Time off respects bookings
One range replaces tapping forty chips. A booked visit in the range blocks the whole action and is named.

D17 · Visit history & D19 · Account & security & D21 · Pause or leave

NEW SCREENS

…/app/doctor/history

Visit history

What Carevia handled. The clinical record is in iMED.

11 Nov · 09:00 Patient Name · General	Completed
11 Nov · 09:30 Patient Name · Follow-up	Needs in-person
10 Nov · 14:00 Patient Name · General	Didn't join
10 Nov · 15:00 Patient Name · General	Cancelled
09 Nov · 10:00 Patient Name · General	Completed

Rows open the visit read-only. No notes, no documents here. 1

Two-factor login

On. Backup codes kept.

Manage

The patient profile screens, opened to the clinician role. Nothing here touches iMED. 2

…/doctor/account/pause

Pause, or leave Carevia

1 **Pause for a while**
Profile hidden, login kept. Tell us from when, and until when if you know.

2 **Leave Carevia**
We close the profile and agenda together, with you.

Dates (for a pause)

From … to … (optional)

Message to the Carevia team (optional)

Operational only. Nothing clinical.

Send request

Booked visits are never cancelled by this form. The team contacts you first, and any visit that must move follows the cancellation terms. 3

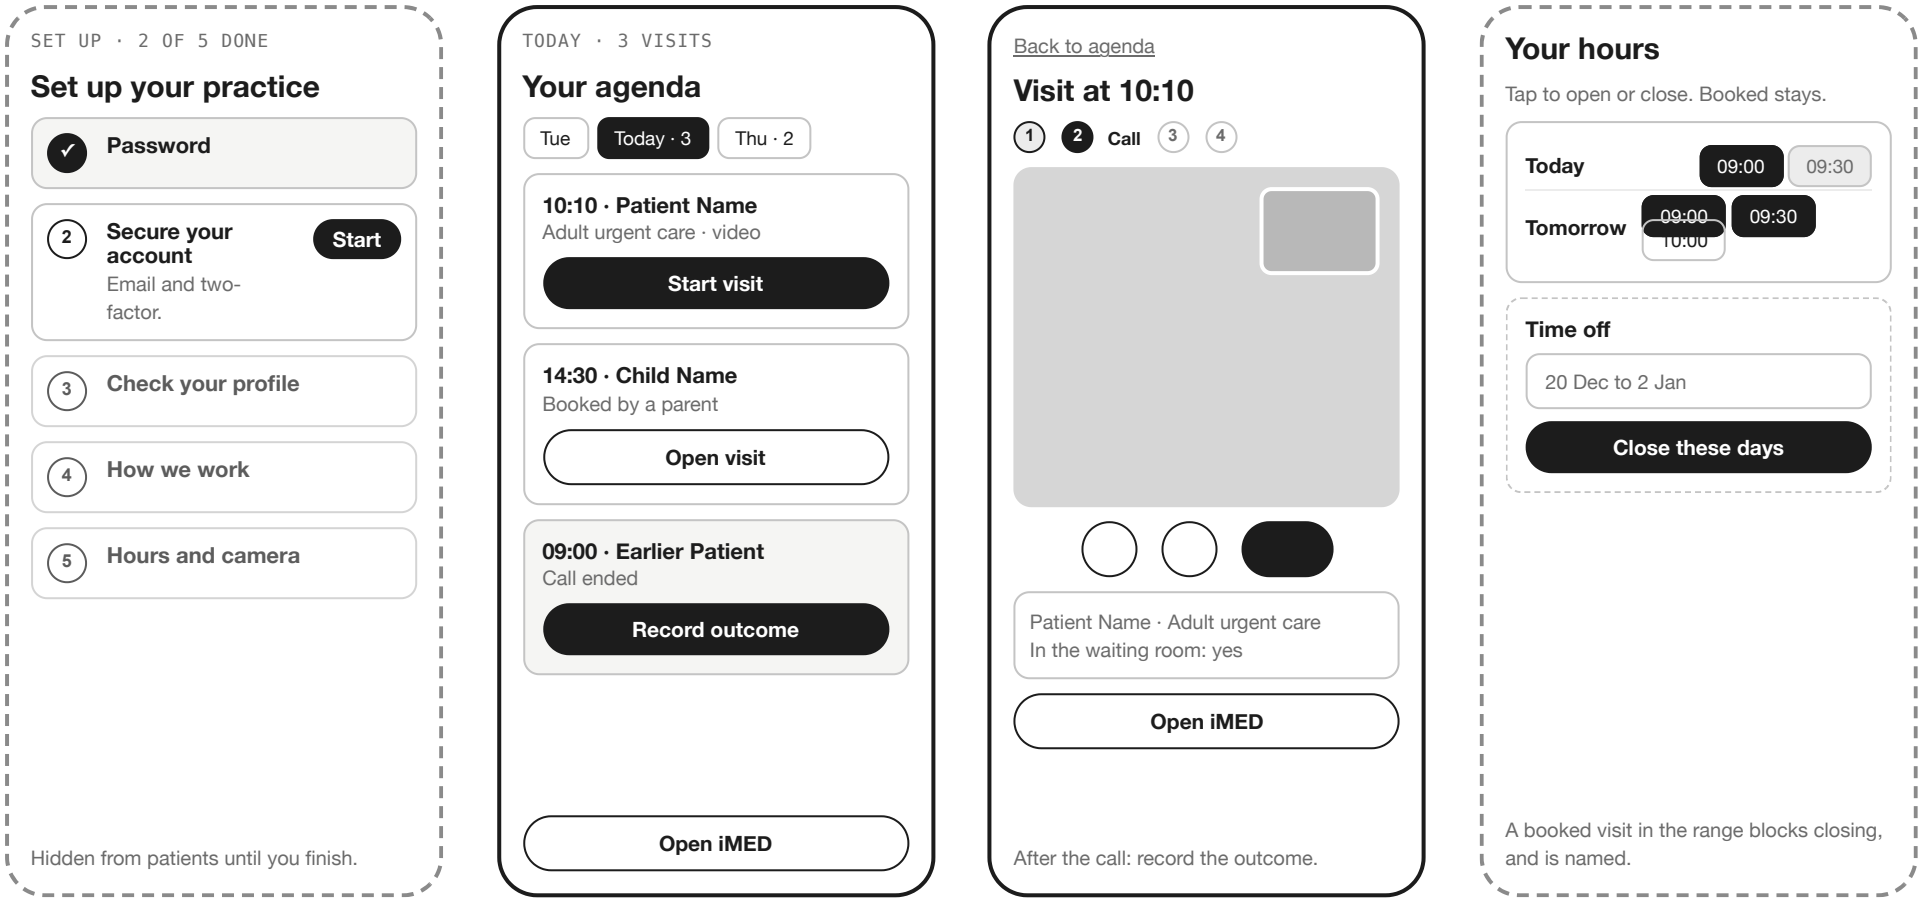

1 History is operational
Time, service, outcome, fee. It answers "did that visit happen?", never "what was said?".

2 Unblocks two-factor
Clinicians invited before onboarding existed manage security here, instead of hitting a patient-only screen.

3 Leaving is a conversation
The form notifies admin. Hiding, cancelling and disabling happen through A04, in order, with the patient looked after first.

The doctor’s day, on a phone

Exists New

M1
Onboarding checklist
One column, 44px targets, resumable after sign-out.

M2
Agenda
The week strip becomes three chips. One thumb from agenda to call.

M3
Call, as owner
Same four steps, stacked. Outcome stays reachable without the call.

M4
Hours and time off
The most-used admin task fits one hand.

E01–E04 · Exceptions, and the way out of each

NEW STATES

E01 · The patient never joins

In D12–D14

Prepare shows “In the waiting room: no”. After the start time the doctor may wait, or end and choose **Patient didn’t join**. The visit closes with that outcome; the patient sees the call didn’t connect. No charge argument starts in Carevia: refund wording follows the cancellation terms.

E02 · The connection is too poor

Exists

Either side drops: the same appointment stays open inside the join window. The doctor can rejoin, or record **Ended: poor connection**. The patient rejoins free or picks a new time with the same visit, never a second payment. The clinical reason, if any, is written in iMED.

E03 · The doctor cannot do a visit NEW

From the visit: **I can’t do this visit**. One confirmation names the result before it happens:

Cancel the 10:10 visit with Patient Name?
The patient is told the visit is cancelled, offered a new time with you or another doctor in General & urgent care, and the cancellation terms apply. The visit is kept as cancelled, never deleted. **Cancel this visit** **Keep the visit**

E04 · Paused, revoked, or not linked NEW

One plain page per state, and no agenda behind it: **not linked** (“Your login isn’t linked to a doctor profile yet”), **paused** (by you or the team, with the date it lifts), **two-factor needed** (a button into D19). Each says who to contact.

What never happens

- **A visit is deleted.** Cancellations are states, with the patient told.
- **A second appointment is created to fix the first.** Reschedule moves the same one.
- **A reason is typed into Carevia.** Outcomes are four choices; reasons live in iMED.
- **A patient is stranded by a pause or close-down.** Booked visits are dealt with first, one by one.

A04 · Close down a doctor (admin)

Refused while confirmed future visits exist, and lists them. When none remain: profile hidden, open times closed, login disabled (kept, so access logs still name their actor). The clinical record stays in iMED, with its depositary.

Pause this doctor Close down

Video is off (no Daily key)

The call step shows the existing “video is off” state for the doctor too: wait, or record the outcome. The agenda never pretends a call can start.

SECTION 7

Build order, inventory and open questions

Wave	Screens and API	Done when
D-A Unblocks everything	A01 application detail, A02 verification checklist, A03 invite and link login, invite API (`/api/admin/doctors/:id/invite`), D03 accept invite, E04 not-linked state	An admin takes a real application to a working clinician login without touching the database by hand.
D-B Onboarding	D04 checklist shell, D05 security, D06 profile check, D07 agreement, D08 first hours, D09 device check, D10 ready; onboarding API; profile stays hidden until D10	A new doctor finishes setup alone, on a phone, and goes live only at the last step.
D-C Daily life	D11 week strip and booking alerts, D17 history, D19 account and security, D20 weekly pattern and time off, E03 doctor cancels a visit, D21 pause request, A04 close-down	A working doctor never needs to email Carevia to run their week.
D-D Later	D18 earnings (needs a real payment provider), real email and SMS sending, Portuguese translation of every new string, the audio-visit doctor flow under its own plan	Nothing in D-A to D-C pre-empts the payment decision.

Open questions (from the plan)

1. Must the clinician be in Portugal, or is a Portuguese cédula with patients in mainland Portugal enough? It changes D07's wording.
2. Who sets the fee: Carevia centrally, or the doctor within a range? A03 assumes admin sets it; D06 shows it read-only.
3. Do doctor-edited languages and experience go live at once, or after an admin glance?

Launch gates this journey adds

Cédula verification evidenced per doctor (A02). Insurance confirmed. Clinician agreement (D07) legally reviewed. A tested doctor-cancels path (E03) and close-down with booked visits (A04). Portuguese versions of D01 to D21.
